SECOND SYMPOSIUM ON OPERATING SYSTEMS PRINCIPLES

OCTOBER 20 - 22, 1969
PRINCETON UNIVERSITY
In designing an operating system one needs both theoretical insight and horse sense. Without the former, one designs an ad hoc mess; without the latter one designs an elephant in best carrara marble (white, perfect, and immobile).

- R. M. Needham and D. F. Hartley
FORWARD

Being busy builders, many who research operating system design principles are given little opportunity to write down their results and experience, or to meet and discuss them. Thus the unusual success of the first Symposium on Operating Systems Principles at Gatlinburg, Tennessee, in October, 1967. Thus, we hope, the success of this, the second symposium.

These Proceedings constitute the permanent record of the Second Symposium on Operating Systems Principles. The papers cover a wide range of topics, including general design principles, new ideas and new approaches to old ideas, and performance evaluation.

We gratefully acknowledge the cooperation of the ACM through its Special Interest Group on Operating Systems (SIGOPS), the Department of Electrical Engineering of Princeton University, and the Princeton University Conference. Believing that numerous individuals receive too little credit for a great deal of unseen, but essential effort, we have included a list of these persons on the next page. Finally, we are grateful to R. W. Hamming for his participation as post-prandial speaker.

Princeton, New Jersey
October, 1969

# TABLE OF CONTENTS

## SESSION I: GENERAL PRINCIPLES OF OPERATING SYSTEMS DESIGN

Bernard A. Galler, Chairman

The System Design Cycle......................................................... 1  
G. H. Mealy

Theory and Practice in Operating System Design.......................... 8  
R. M. Needham, D. F. Hartley

The Role of Motherhood in the Pop Art of System Programming.......... 13  
P. G. Neumann

Machine Independent Software................................................. 19  
P. C. Poole, W. M. Waite

## SESSION II: VIRTUAL MEMORY IMPLEMENTATION

Jack B. Dennis, Chairman

Measurements of Segment Size................................................ 25  
A. Batson, S. Ju, D. Wood

The Multics Virtual Memory................................................... 30  
A. Bensoussan, C. T. Clingen, R. C. Daley

Complementary Replacement -- A Meta Scheduling Principle............. 43  
H. Hellerman

Optimal Segmentation Points for Programs.................................. 47  
B. W. Kernighan

Strategies for Structuring Two Level Memories in a Paging Environment......................................................... 54  
A. L. Vareha, R. M. Rutledge, M. M. Gold

## SESSION III: PROCESS MANAGEMENT AND COMMUNICATION

Elliott I. Organick, Chairman

Process Control and Communication.......................................... 60  
A. J. Bernstein, G. D. Deflefsen, R. H. Kerr

Process Management and Resource Sharing in the Multiaccess System "ESOPE"................................................................. 67  
C. Betourne, J. Boulenger, J. Ferrie, C. Kaiser,  
J. Kott, S. Krakowiak, J. Mossiere
Basic Time Sharing: A System of Computing Principles
D. B. Earl, F. L. Bugely

Structure of Multiple Activity Algorithms
J. B. Johnston

The Multics Interprocess Communication Facility
M. J. Spier, E. I. Organick

SESSION IV: SYSTEMS AND TECHNIQUES
Edgar T. Irons, Chairman

The Structure of ILLIAC IV Operating System
P. A. Alsberg, C. R. Mills

A Program Simulator by Partial Interpretation
K. Fuchi, H. Tanaka, Y. Manago, T. Yuba

HELPER: An Interactive Extensible Debugging System
H. E. Kulsrud

Multiprogramming in a Small Systems Environment
D. L. Mills

Basic I/O Handling on the Burroughs B6500
P. M. Patel

SESSION V: INSTRUMENTATION AND MEASUREMENT
M. D. McIlroy, Chairman

Measurement and Performance of a Multiprogramming System
B. W. Arden, D. Boettner

The UTS Time Sharing System: Performance Analysis and Instrumentation
G. E. Bryan, J. E. Shemer

Two Approaches for Measuring the Performance of Time Sharing Systems
A. D. Karush

The Instrumentation of Multics
J. H. Saltzer, J. W. Gintell

Performance Monitors for Multiprogramming Systems
W. A. Wulf
